

I support XM satellite radios right to broadcast local traffic and weather, and believe that it should be allowed. It is important that listeners be aware of traffic conditions and warned about dangerous weather situations without someone making a big profit, by getting to it, AFTER a commercial. The variety and quality of this 'paid for, by the consumer' XM service is excellent and not available elsewhere, this should not be tampered with by the NAB or accepted by the FCC. Please reject the NAB's petition 04-160.
